

I believe every citizen has a duty to serve his/her country through military service:

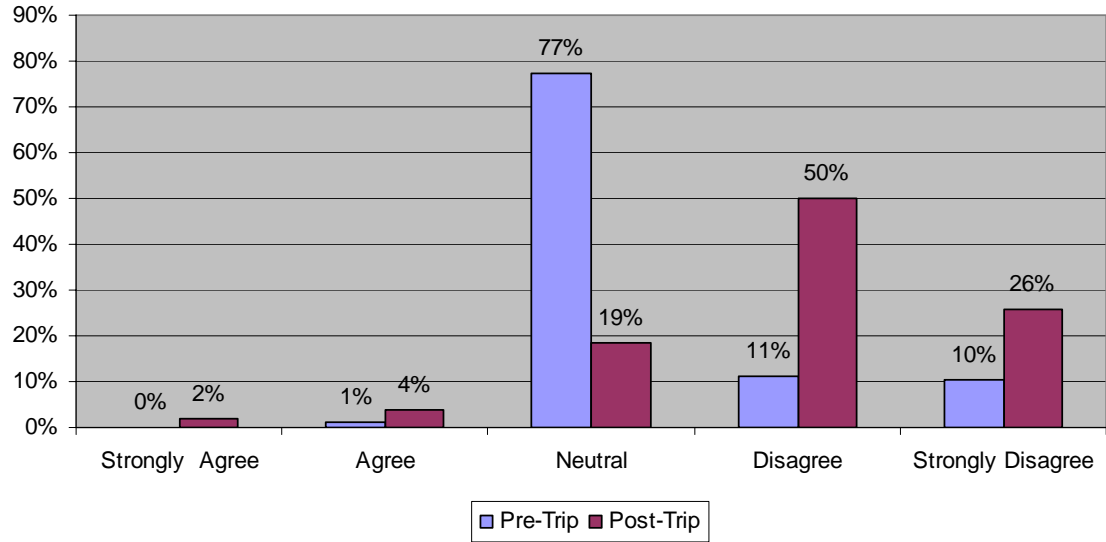

I let my friends make decisions for me.

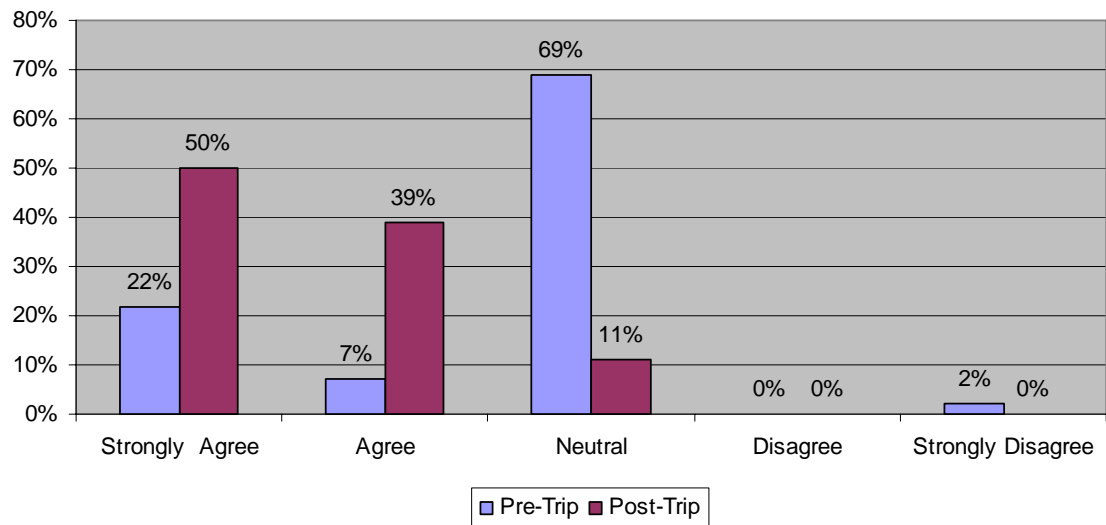

College is an important goal for me.

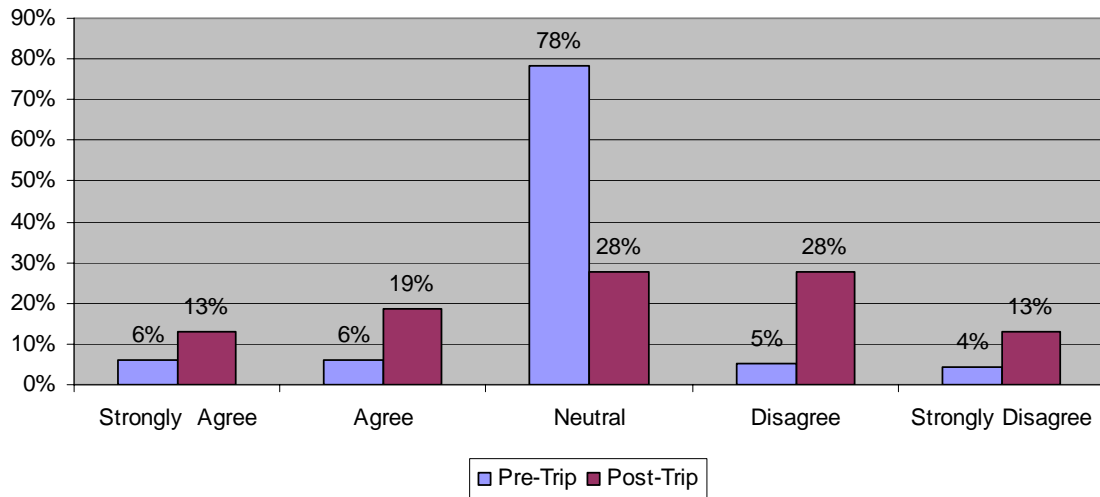

Math and Science are boring:

My classes in school are important to my future.

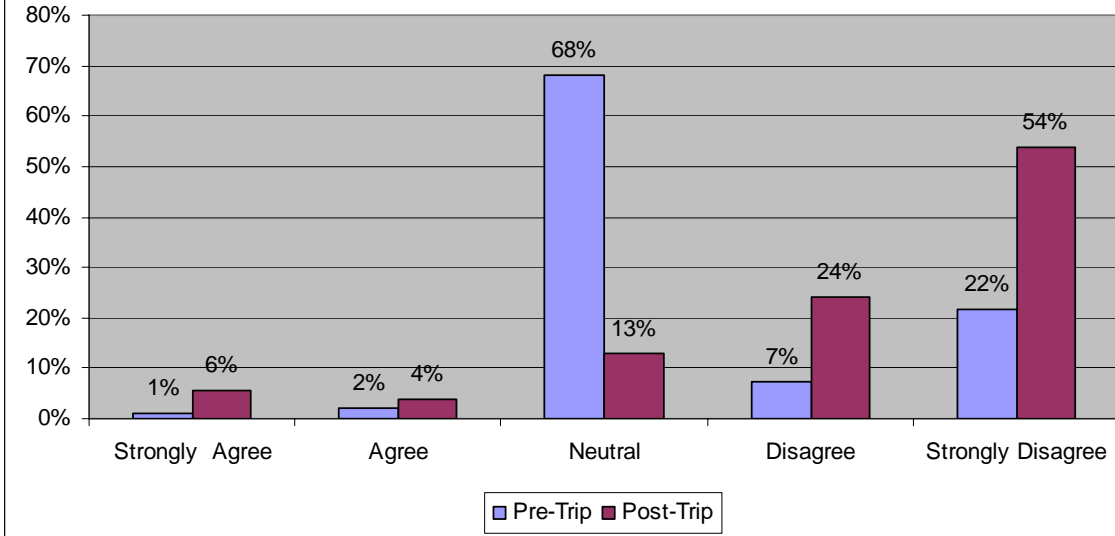

Money is the most important factor in what type of job I want to have.

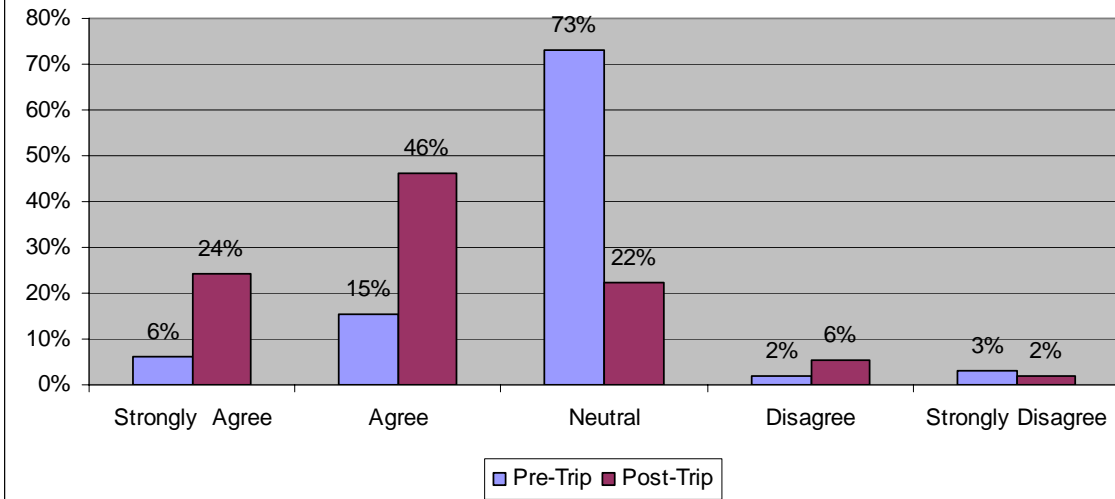

Getting a job is more important to me than finishing high school.

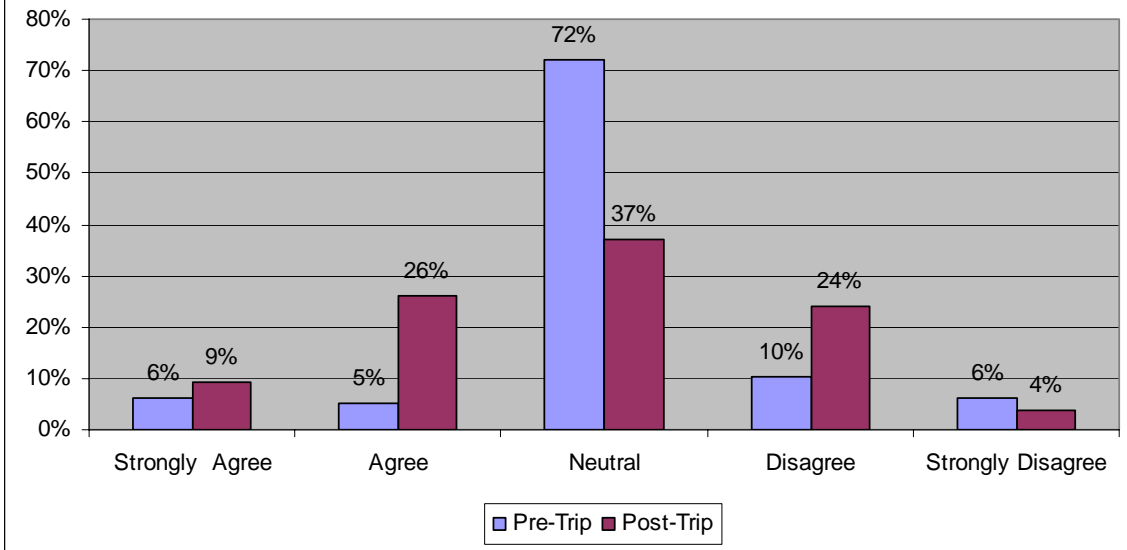

College is not a realistic goal for me.

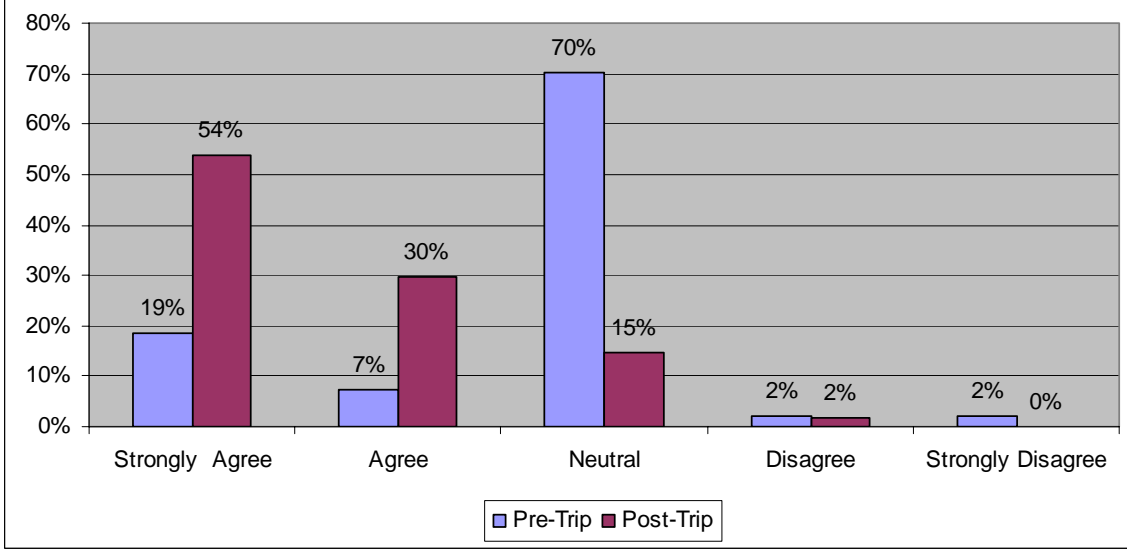

The military can teach me skills that will be useful in other situations.

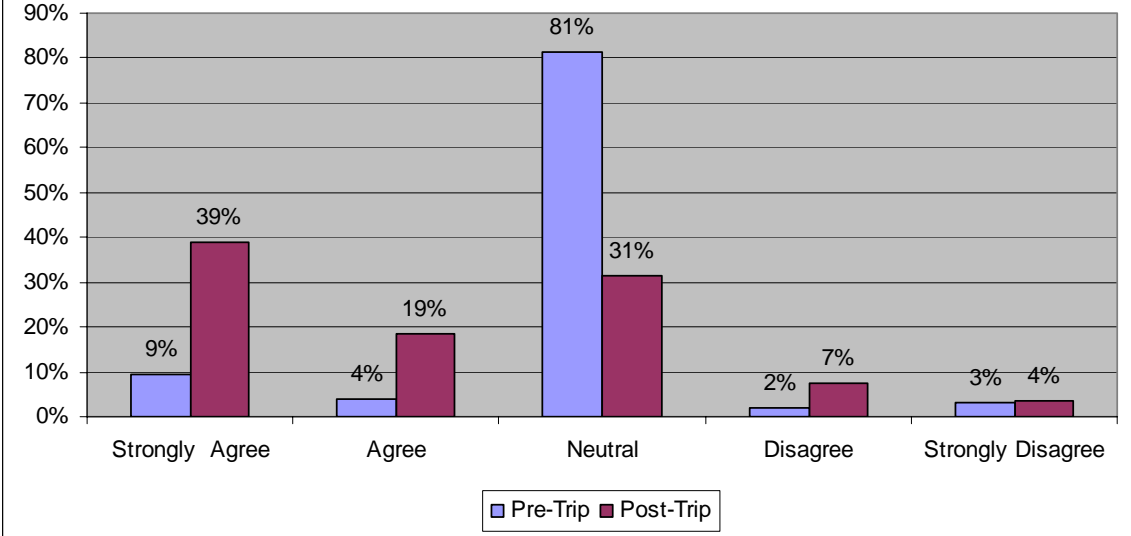

The reason I take science is to meet high school requirements.

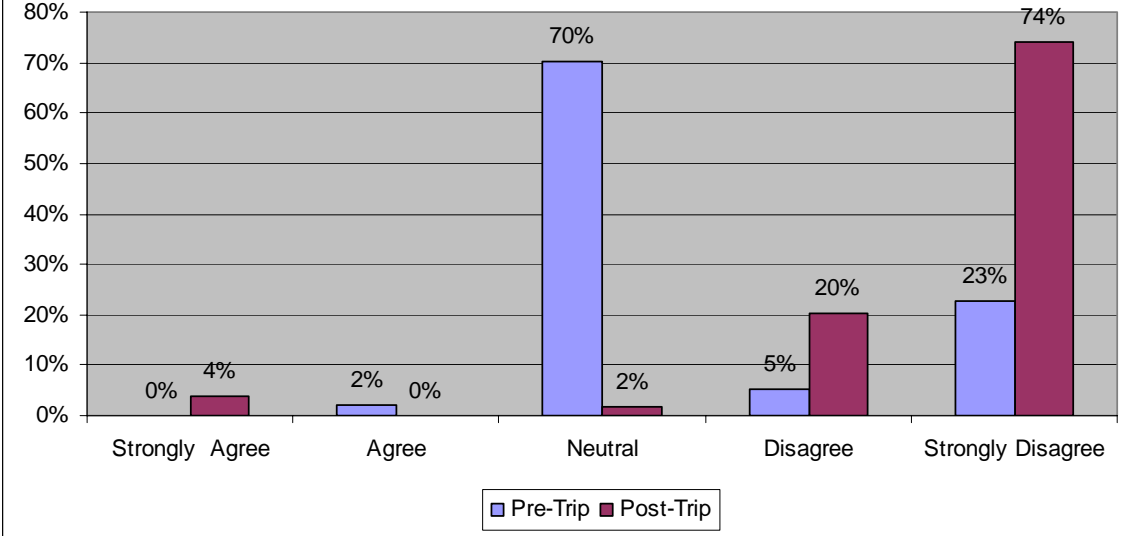

I need a high school diploma in order to be successful in life.

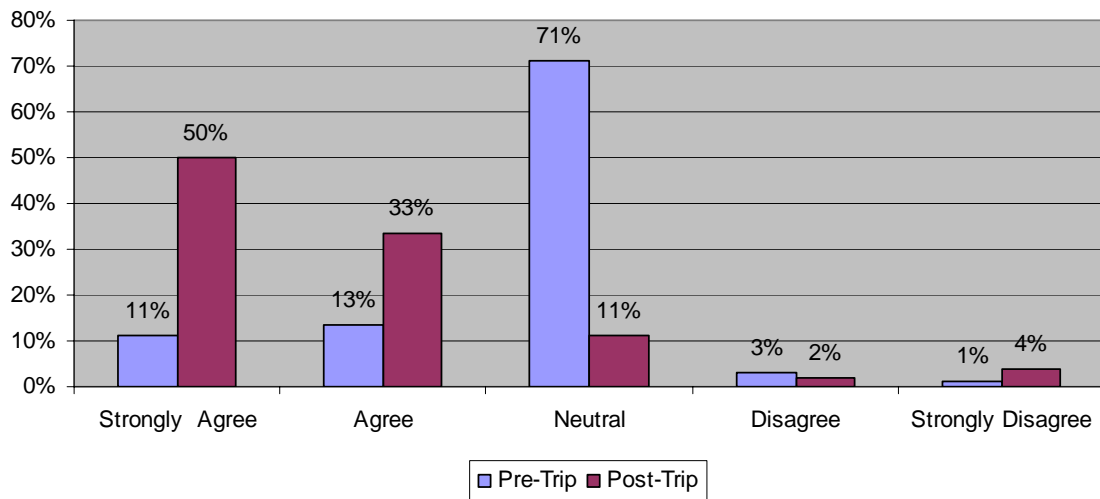

I learn more from "hands-on" activities than reading from a book.

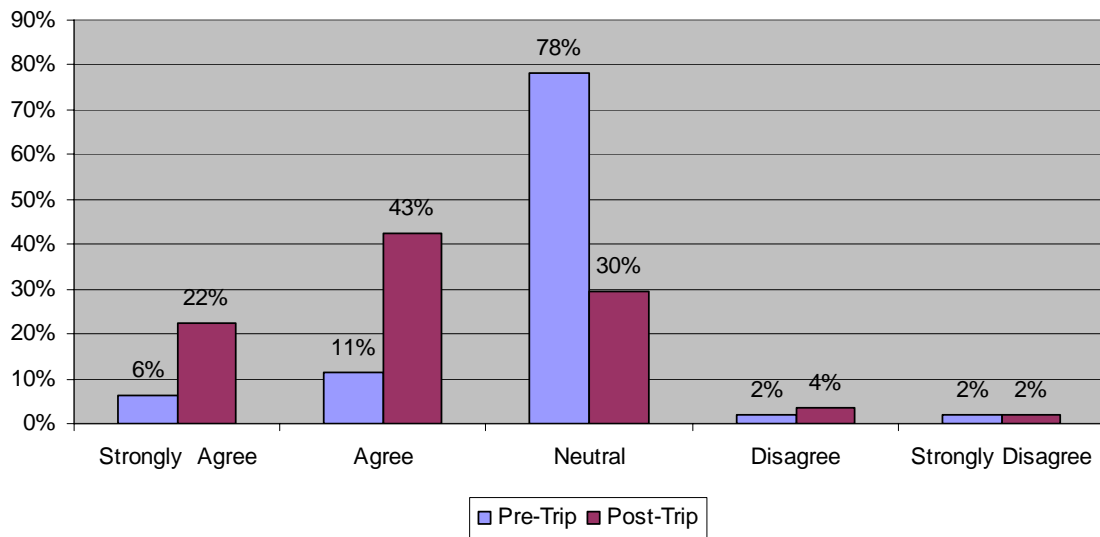

School will not help me have a better life.

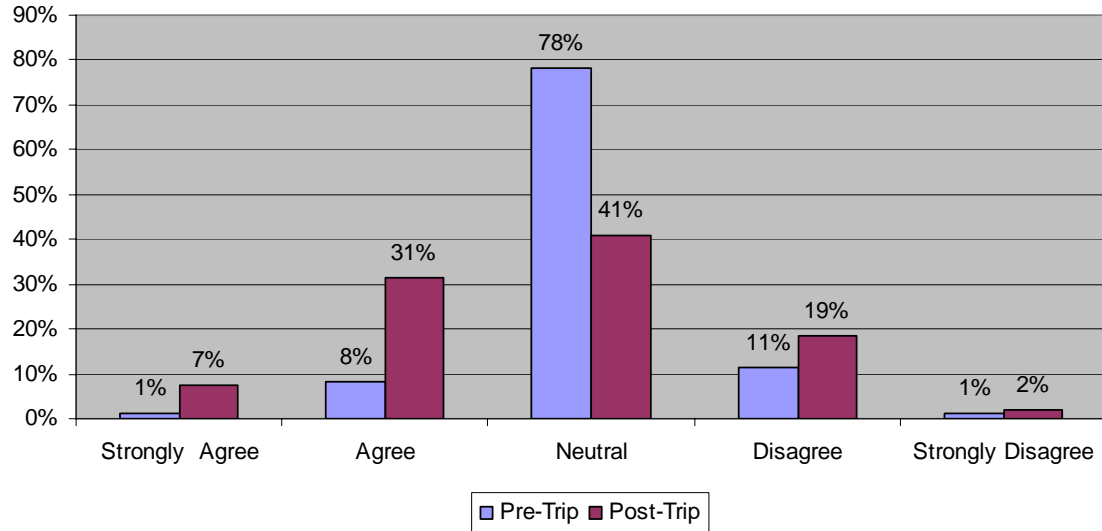

The main goal of Reach For Tomorrow is to show me future opportunities I don't know about.

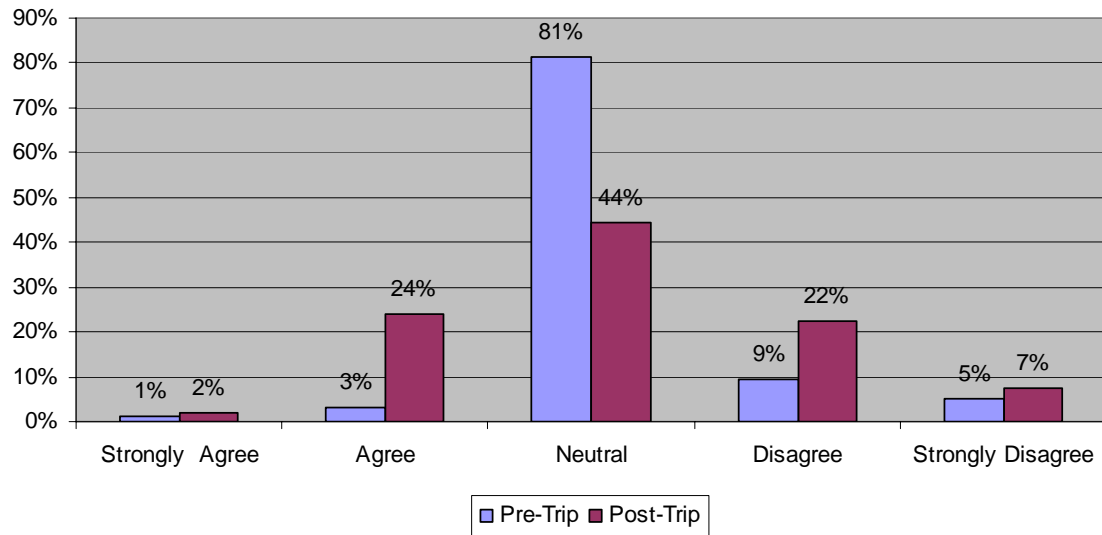

My life experiences will be important to an employer.

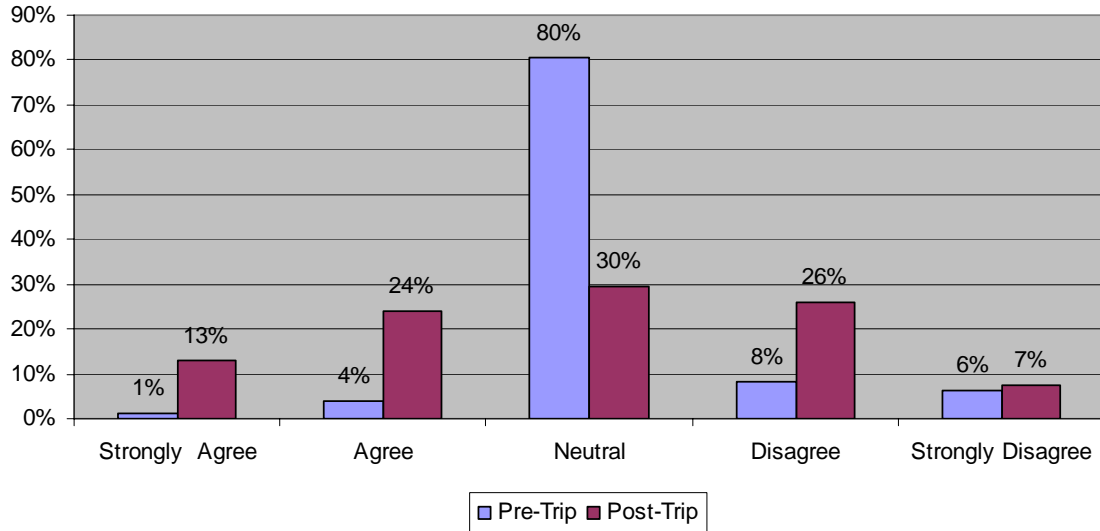

If I had a choice, I would take more science courses.

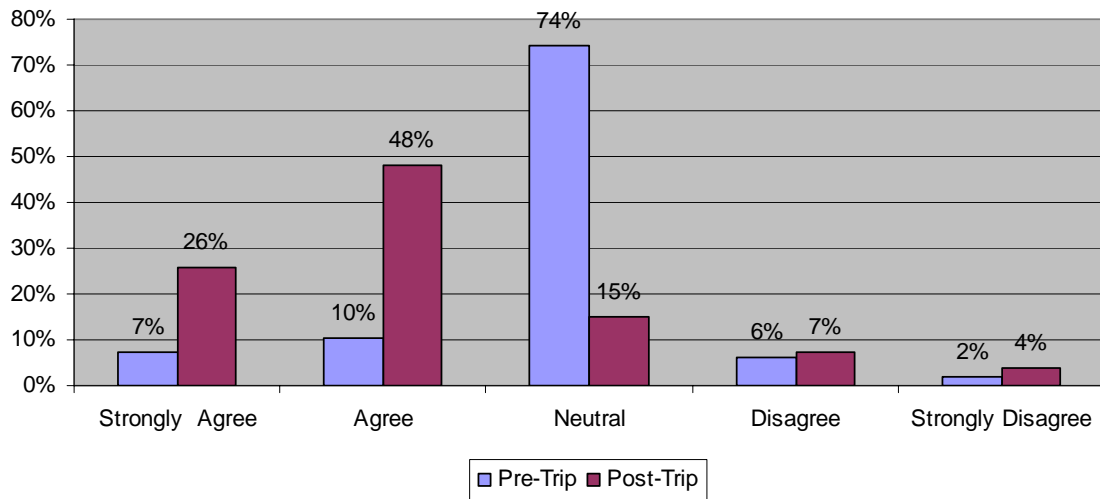

The military is accurately portrayed on TV and in movies.

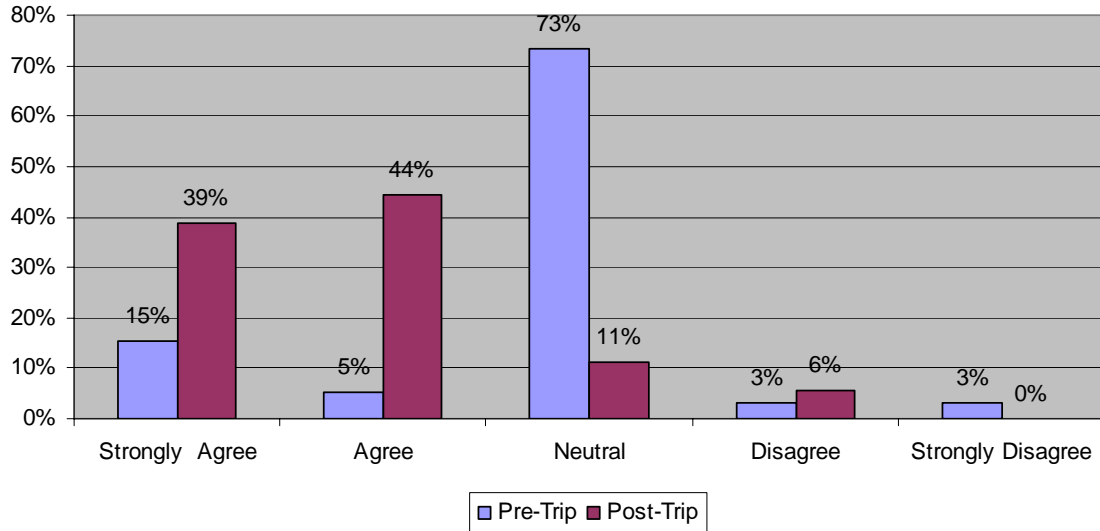

I don't know how I am going to pay for college.

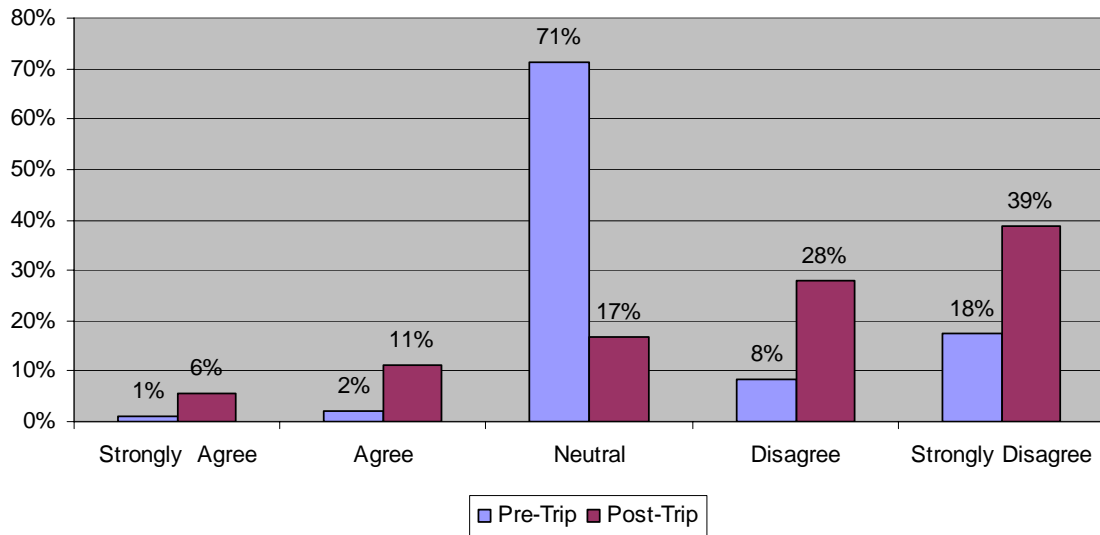

I have spoken to current or former military people about their experiences.

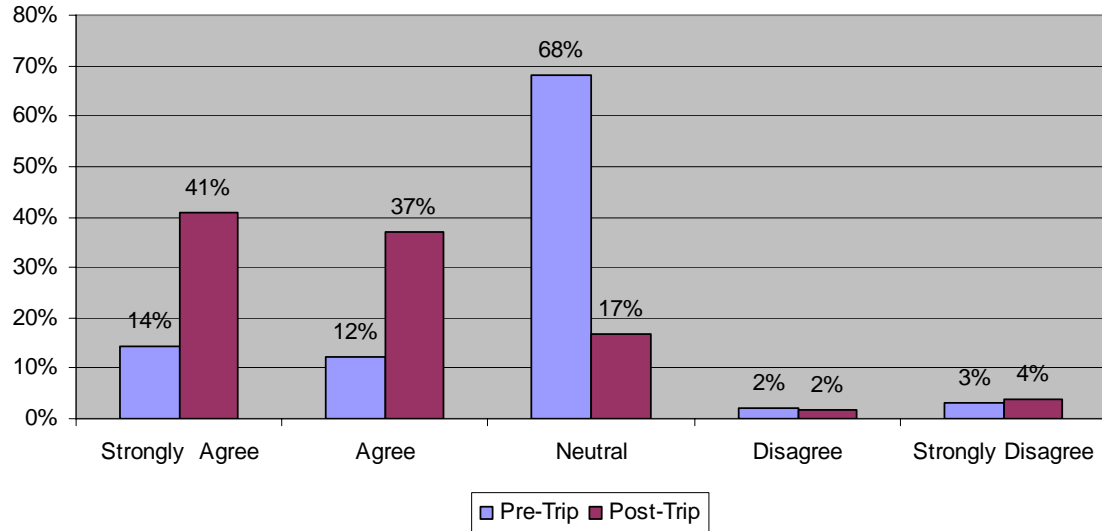

Math classes are just as important as classes in other subjects.

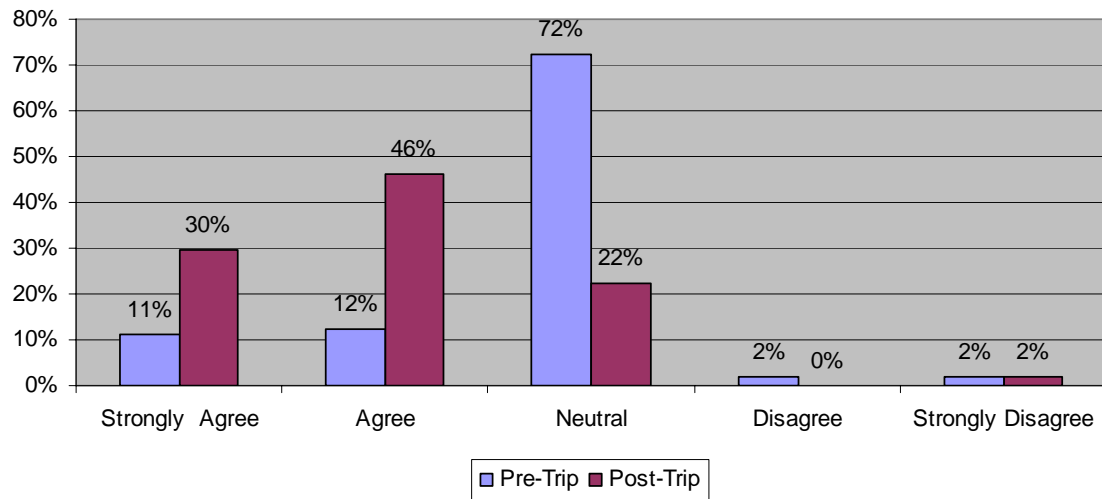

I just want to finish high school and be done with it.

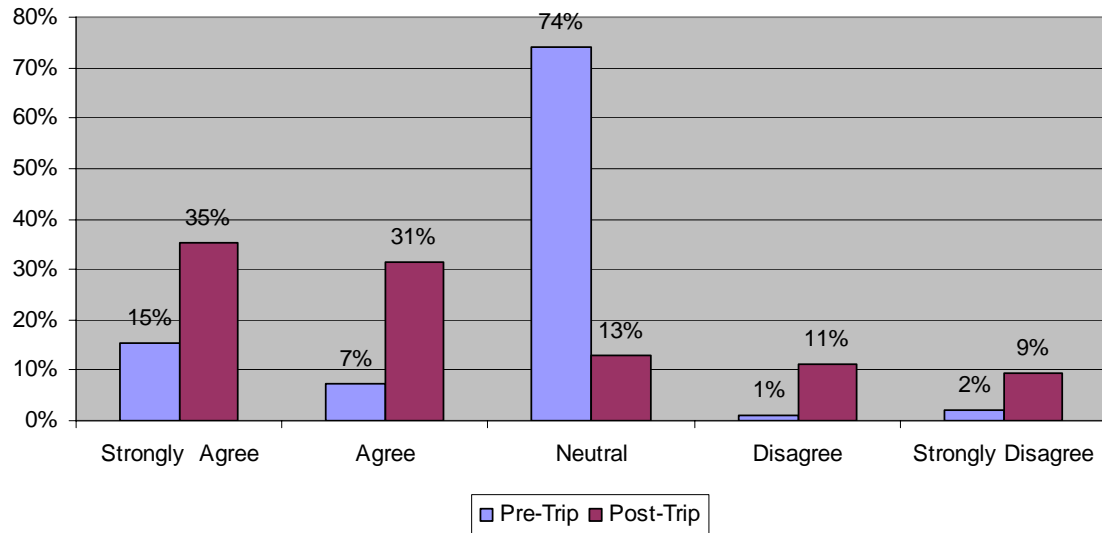

Going to college requires good grades in high school.

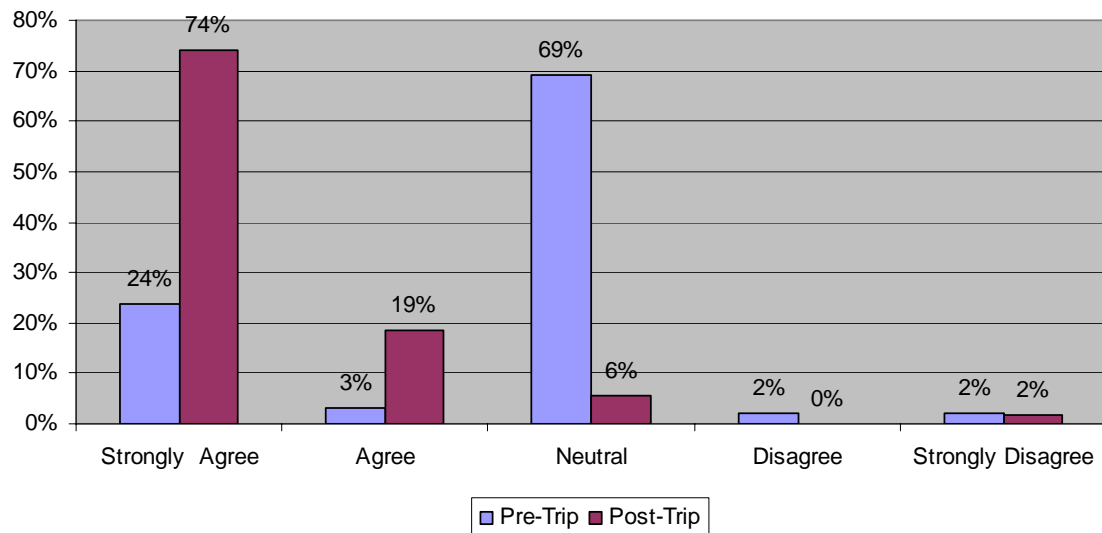

I understand learning styles (hearing, seeing, etc.) and know my best learning style.

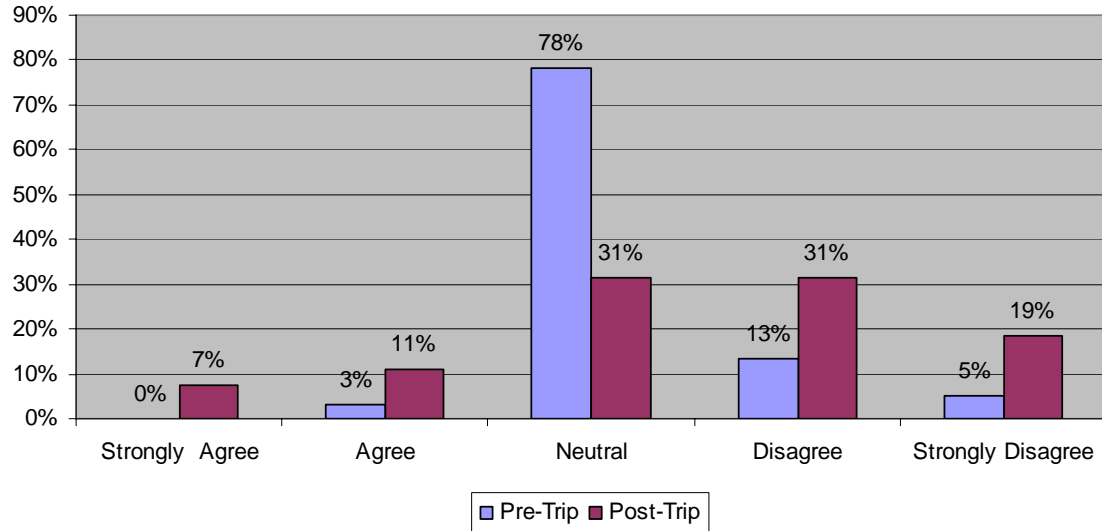

My plan is to finish high school before I go to work full-time.

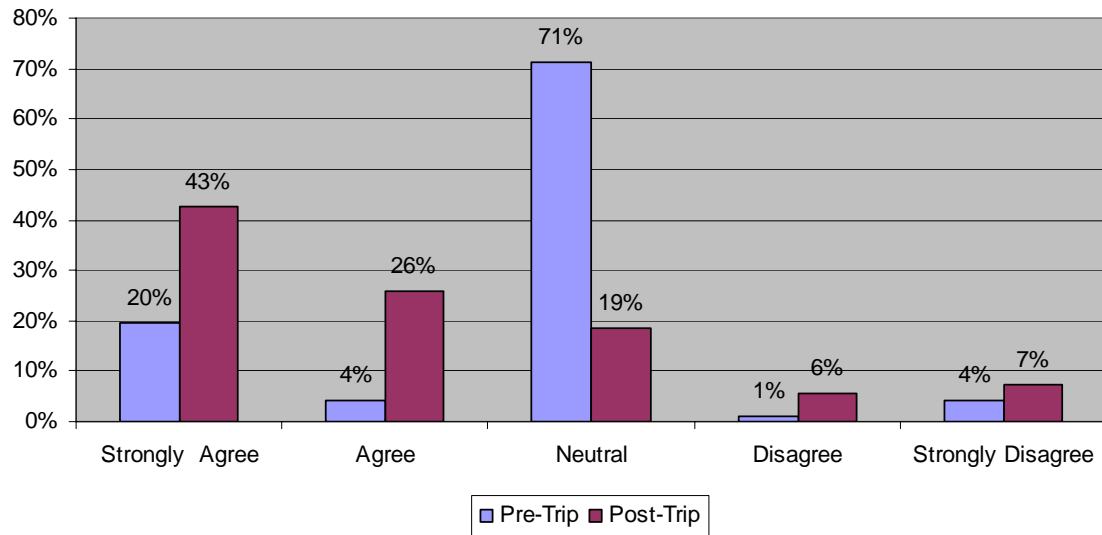

A college degree can lead to better jobs.

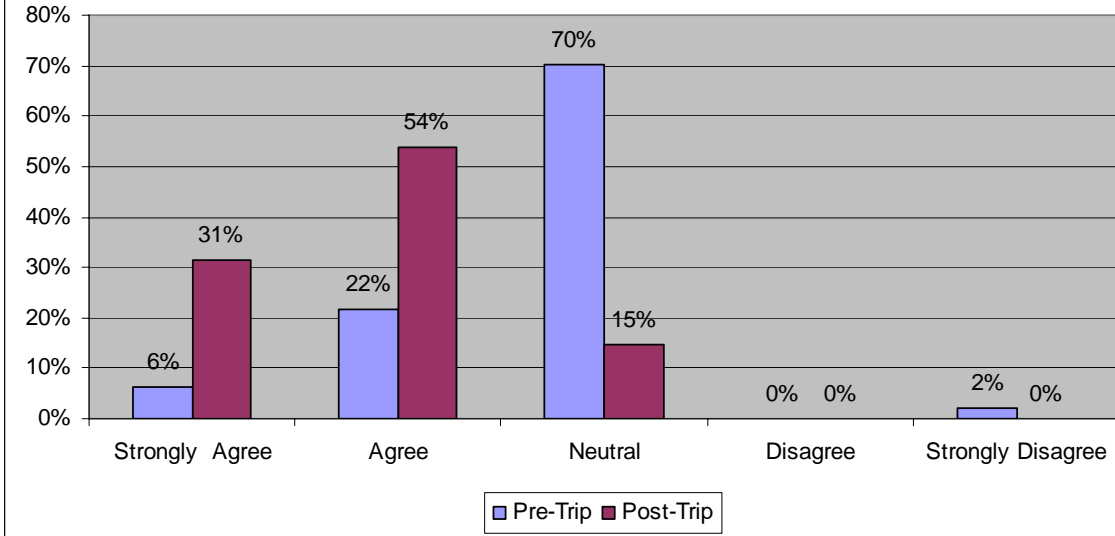

The military offers very few career choices.

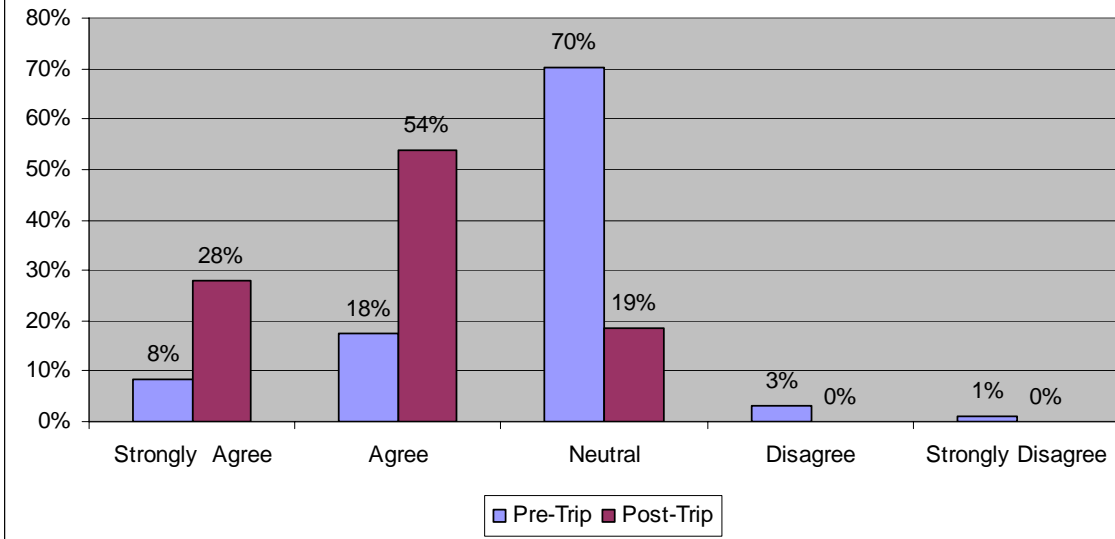

A high school diploma is not enough for me.

There is usually more than one way to solve a science problem.

Colleges have different entrance requirements.

My grades are not good enough to go to college.
